

User Interface Bugs:

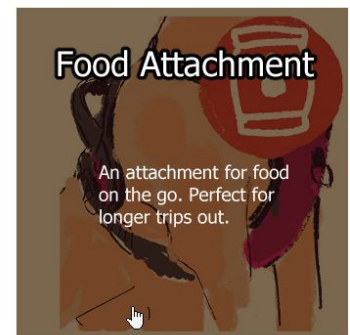

-

-

Some pages were not linked

properly (such as the products page after placing an item into the cart).

-

- Text doesn't line up perfectly when images and often shift inaccurately
- Images sometimes overlapped the edge (not super accurate in where they were placed)

Challenges/bugs in implementation

- Having the images accurately and evenly spaced-- worked around this by having an even padding around each images
- Text on the images did not move around accurately-- had the text locked to each image and tied it to hover action

Brand Identity

I wanted to have less text on the pages in order to have most of the focus upon the images. Because Muddy Buddy's tagline is 'adventure gear', having a focus upon the animals instead of just text allows the site to have the images speak for themselves.
